2. Agent Mission

Agent Mission Timeline

Production Security 15.0

Role-based access, human approval for sensitive operations, and local security audit logging.

Role	Approval	Autonomous Writes	Audit Events
Operator	OFF	DENIED	0

Production policy & audit

Workflow Automation

Chain multiple read-only Agent missions into one guided workflow. Each step can use the previous result as bounded context.

Choose workflow

Run Workflow

3. Goal-Based Autonomous Planner

 **Goal-Based Autonomous Planner**

Give Nexus one high-level goal. It decomposes the goal into dependent read-only subtasks, executes them in order, verifies each stage, and produces a final result.

High-level goal

Example: Research the best local AI models for a cybersecurity workstation and recommend one.

Build Plan

 **Self-Healing Agent 13.0**

Bounded automatic recovery for failed or empty agent runs. One retry only; no destructive autonomous actions.

Recovery	Attempts	Recovery Retries
FAILED	0	0

No self-healing event yet. Normal successful missions require no recovery.

4. Production Security 15.0

 Production Security 

Access role

Operator 

☐ Human approval for sensitive operations 

Viewer: basic use • Operator: cybersecurity with approval • Admin: full configured read-only access

 AI Model Control 

 AI Model Control

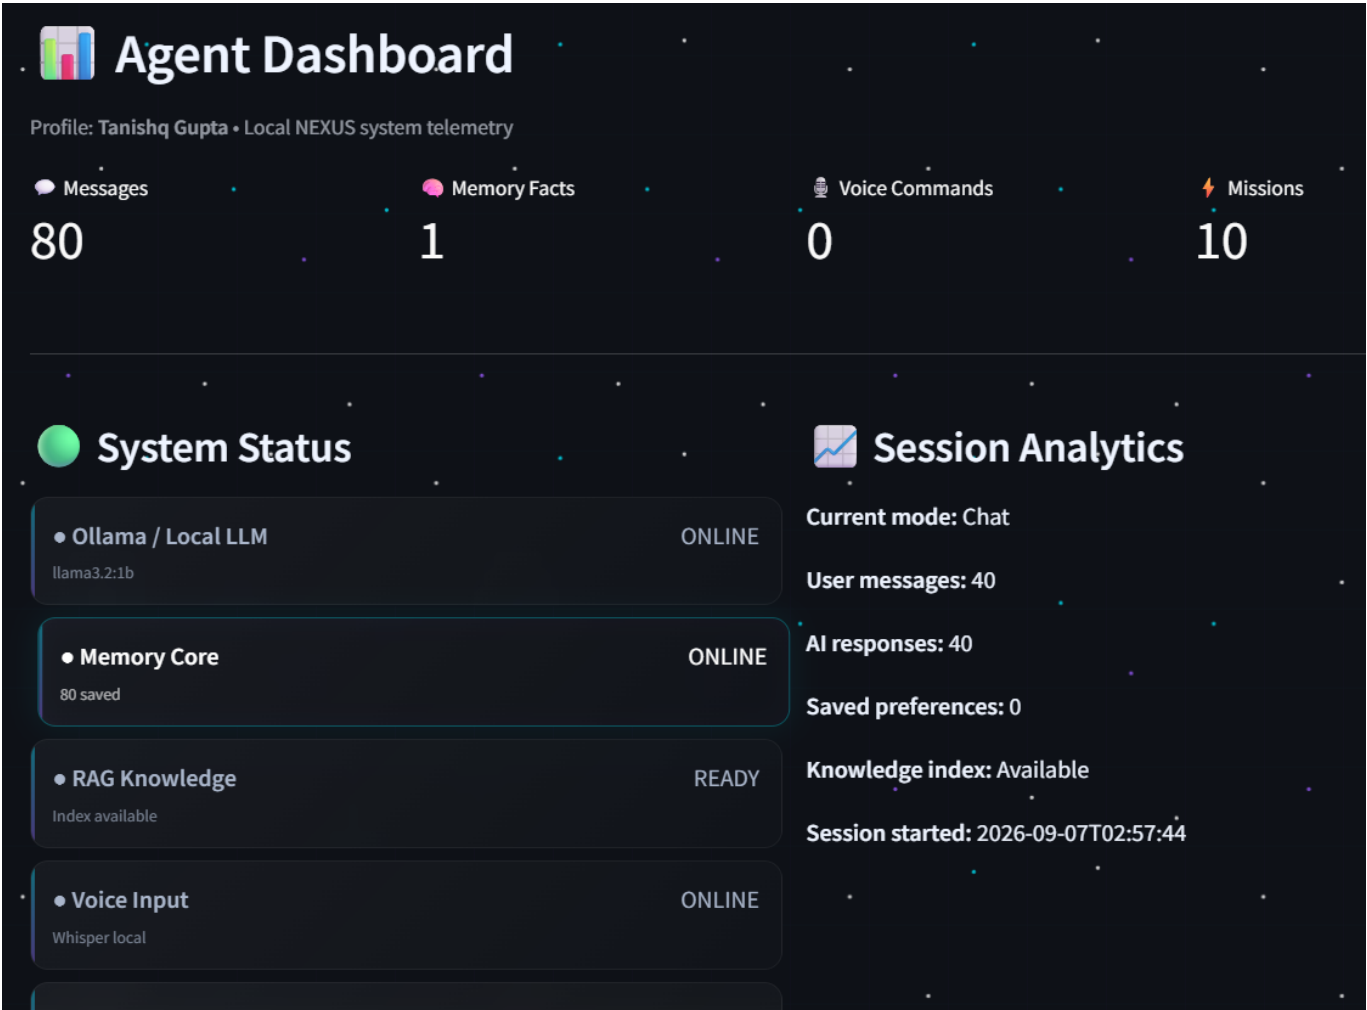

Local Ollama Model

llama3.2:1b 

 Active: llama3.2:1b

All AI replies, document study tools and chat use this local model.

5. Agent Observatory

6. Historical Mission Memory & Analytics

7. Agent Benchmark — 5/5, 100/100

 Clear Memory

 **Agent Benchmarking 14.7**

Parallel performance benchmark with deterministic fast paths, bounded network probing, cache-aware execution, and no evaluator LLM call.

 Test ...	 Last ...	 Pass ...	 Grade
5	1...	1...	A+

 Run Fast Benchmark

Benchmark 14.7: 5/5 passed • 100/100 •
Grade A+ • Total 0.19s
